Individual reflection - Week 1

What do I want to learn or understand better?

Learning objective - Scrum:

A: I currently have no knowledge of the process and working progress of scrum.

B: Understanding and knowledge of how to practice scrum and how to use its efficiency in different problems (mainly to maintain during the project).

C: Study lecture slides and discuss within the project group.

How can I help someone else, or the entire team, to learn something new?

By being reachable and understandable if something is occurring. Then trying to solve it by communication if something comes up. With my current programming knowledge I can help other students get understand git.

What is my contribution towards the team's use of Scrum?

I go to lectures and study about scrum, and will have continuously communication with the group. We have discussed of how we want to work with Scrum in our team.

What is my contribution towards the team's deliveries?

So far we have not started with the product development, hence there is no deliveries from my side to report about. Although, we had an exercise to work with sprints were we painted different paintings and had different projects from an example project owner to accomplish.
